

Implementing and Operating Cisco Service Provider Network Core Technologies (SPCOR)

Cisco

- **Nível:**
 - **Duração:** 35h
-

Sobre o curso

The **Implementing and Operating Cisco Service Provider Network Core Technologies (SPCOR)** course teaches you how to configure, verify, troubleshoot, and optimize next-generation, Service Provider IP network infrastructures. It provides a deep dive into Service Provider technologies including core architecture, services, networking, automation, quality of services, security, and network assurance.

This course also helps you prepare to take the **350-501 Implementing and Operating Cisco® Service Provider Network Core Technologies (SPCOR)** exam, which is part of the new **CCNP® Service Provider** certification and the **Cisco Certified Specialist – Service Provider Core** certification.

This course will help you:

- Configure, verify, troubleshoot, and optimize next-generation, Service Provider IP network infrastructures
- Deepen your understanding of Service Provider technologies including core architecture, services, networking, automation, quality of services, security, and network assurance
- Prepare to take the **350-501 Implementing and Operating Cisco® Service Provider Network Core Technologies (SPCOR)**

After taking this course, you should be able to:

- Describe the Service Provider network architectures, concepts, and transport technologies
- Describe the Cisco Internetwork Operating System (Cisco IOS®) software architectures, main IOS types, and their differences
- Implement Open Shortest Path First (OSPF) in the Service Provider network

- Implement Integrated Intermediate System-to-Intermediate System (IS-IS) in the Service Provider network
 - Implement Border Gateway Protocol (BGP) routing in Service Provider environments
 - Implement route maps and routing policy language
 - Describe IPv6 transition mechanisms used in the Service Provider networks
 - Implement high-availability mechanisms in Cisco IOS XR software
 - Implement traffic engineering in modern Service Provider networks for optimal resource utilization
 - Describe segment routing and segment routing traffic engineering concepts
 - Describe the VPN technologies used in the Service Provider environment
 - Configure and verify Multiprotocol Label Switching (MPLS) L2VPN in Service Provider environments
 - Configure and verify MPLS L3VPN in Service Provider environments
 - Implement IP multicast services
 - Describe the Quality of Service (QoS) architecture and QoS benefits for SP networks
 - Implement QoS in Service Provider environments
 - Implement control plane security in Cisco devices
 - Implement management plane security in Cisco devices
 - Implement data plane security in Cisco devices
 - Describe the Yet Another Next Generation (YANG) data modeling language
 - Implement automation and assurance tools and protocols
 - Describe the role of Cisco Network Services Orchestrator (NSO) in Service Provider environments
 - Implement virtualization technologies in Service Provider environments
-

Destinatários

- Network administrators
 - Network engineers
 - Network managers
 - System engineers
 - Project managers
 - Network designers
-

Pré-requisitos

- Intermediate knowledge of Cisco IOS or IOS XE
- Familiarity with Cisco IOS or IOS XE and Cisco IOS XR Software configuration
- Knowledge of IPv4 and IPv6 TCP/IP networking
- Intermediate knowledge of IP routing protocols
- Understanding of MPLS technologies

- Familiarity with VPN technologies
-

Metodologia

Instructor-led training: 5 days in the classroom with hands-on lab practice, plus the equivalent of 3 days of self-study material.

Programa

- Describing Service Provider Network Architectures
- Describing Cisco IOS Software Architectures
- Implementing OSPF
- Implementing IS-IS
- Implementing BGP
- Implementing Route Maps and Routing Protocol for LLN [Low-Power and Lossy Networks] (RPL)
- Transitioning to IPv6
- Implementing High Availability in Networking
- Implementing MPLS
- Implementing Cisco MPLS Traffic Engineering
- Describing Segment Routing
- Describing VPN Services
- Configuring L2VPN Services
- Configuring L3VPN Services
- Implementing Multicast
- Describing QoS Architecture
- Implementing QoS
- Implementing Control Plane Security
- Implementing Management Plane Security
- Implementing Data Plane Security
- Introducing Network Programmability
- Implementing Automation and Assurance
- Introducing Cisco NSO
- Implementing Virtualization in Service Provider Environments

Labs

- Deploy Cisco IOS XR and IOS XE Basic Device Configuration
- Implement OSPF Routing

- Implement Integrated IS-IS Routing
- Implement Basic BGP Routing
- Filter BGP Prefixes Using RPL
- Implement MPLS in the Service Provider Core
- Implement Cisco MPLS Traffic Engineering (TE)
- Implement Segment Routing
- Implement Ethernet over MPLS (EoMPLS)
- Implement MPLS L3VPN
- Implement BGP Security
- Implement Remotely Triggered Black Hole (RTBH) Filtering
